Thank you for choosing to use a London Electronics Ltd. product. We hope that you will be entirely satisfied with your purchase, and welcome any comments you may have which will help us to improve the ease of use, clarity of this manual, etc. for future shipments.

We invite you to write to us, free of charge, if posted in the United Kingdom, to:-

London Electronics Ltd.
Customer Services Department
FREEPOST SG334
SHEFFORD
Bedfordshire SG17 5BR

Alternatively you may send us a fax on 01462-850968 (international code +44)
Or, telephone us on 01462-850967 (international code +44)

Or, send us an E-Mail to sales@london-electronics.com

To enable us to provide a swift and accurate service, please be sure to provide the following information :-

1) Full Model Number, including all options fitted.
2) Serial Number
3) DETAILED description of your difficulties, suggestions etc.
4) Input Range and Display range

This product is covered by a 2 year warranty, during which period we will put right or replace any meter found to be faulty through bad workmanship or materials. This warranty does not cover damage caused by misuse or accident.

**IMPORTANT** If the meter is a vital component in your process, you may wish to consider the purchase of a spare to cover the possible eventuality of a failure or accident, as we cannot guarantee instant repair or replacement.

We are constantly striving to improve our products and services, and as a result, changes to instruments do occur. Please ensure that this manual is kept safely for future reference, as future manuals, covering revised designs may no longer describe your product accurately.

We believe these instructions to be accurate, and the product to be competently designed and manufactured. We do not make any claims as to the suitability of this product for any particular application. The choice of product and responsibility for the choice lies with the User.

**Safety First** ............Don’t make assumptions............ Always double check. 
*If in doubt, ask someone who is QUALIFIED to assist you in the subject.*
## EQUIPMENT SPECIFICATIONS

**Input Signal**
- 4-20mA

**Input Resistance**
- 50 Ohms

**Resolution**
- Infinite

**CMRR**
- 70 dB DC to 450 Hz.

**NMRR**
- 56 dB 45 to 10000 Hz.

**Open Circuit Input Response**
- Downscale Drive

**Speed of Response**
- < 100 mS

**Accuracy**
- +/- 0.1% of span

**Temperature stability**
- 100 ppm of range/C span and zero

### Outputs
- Number of output channels: 3
- Loop drive capacity: 600 Ohms per loop
- Span adjustability: +/- 9 mA at 20 mA input
- Zero adjustability: +/- 1 mA at 4 mA input
- Influence between outputs: Minimal. Any load conditions on one O/P has negligible effect on others
- Adjustment location: On top surface of transmitter, via access slot
- Isolation: Isolated from ground, but not from input

**Excitation Supply**
- 20 VDC nominal
- Accuracy: Unregulated, depends on power input and loading
- Current Capacity: 28mA max. permissible load

**Power Supply**
- AC Supply: 115 or 230 VAC 50 or 60Hz. as standard. Select using internal links
- Current Consumption: Allow 3VA if excitation supply fully loaded.

**Mechanical**
- Base size: 50 mm wide by 70 mm high
- Forward projection: 110 mm
- Weight: 270 grammes

**Environmental**
- Operating Temperature: 0 to +50 degrees C
- Storage Temperature: -40 to +85 degrees C
- Humidity: 90% rh max. at 40 C, non condensing.
All wiring to this device must be carried out in accordance with current IEC regulations. Separation of all power carrying cables must be ensured in accordance with IEC 1010.

Installation Class II
Pollution degree 2

This device is to be installed within a secure enclosure, to prevent accidental access by persons to the powered connections present on the terminals.

For Base mounting, drill 2 holes of 4mm dia. in the base plate as shown.

Or, you may fit the transmitters directly onto DIN46277-3 or CENELEC EN 50 022

Connections

3 independent outputs

Power-On Indicator

~ AC Line
~ AC Neutral
Earth (Ground)

+ 4-20 I/P
- 4-20 I/P
+ Excitation

INPUT

IMPORTANT: Do not run signal wires near any power-carrying cables. Power-carrying cables will almost certainly radiate appreciable amounts of electro-magnetic energy, which could interfere with the small signals you are trying to measure. Use screened cable, in its own separate conduit or tray. Connect the screen at one end only, to a clean earth point as near to the meter as possible.
1) Ensure that the transmitter's power voltage settings are correct.

2) If the unit was ordered from us and calibration details were given at the time of ordering, you should not need to make any alterations to the transmitter's settings apart from applying input signals and checking the calibration.

3) Apply power, and leave the transmitter running for a few minutes before commencing calibration.

4) Apply 4 mA to the input, and measure O/P 1. Adjust its zero pot to obtain 4mA output.

5) Apply 20 mA to the input and measure O/P 1. Adjust its span pot to obtain 20 mA output.

6) Repeat steps 4) & 5) until no further adjustment is needed.

7) Apply 12mA and check that the output is 12mA also.

8) Repeat steps 5 to 7 until no further adjustment is necessary, and repeat the same procedure for outputs 2 and 3.

Changing Supply Voltage Settings

The TIM018 may be powered from 110 or 230 VAC, and the choice is made by appropriate selection of solder-in links adjacent to the transformer.

To gain access to these links, firstly ensure that power has been removed from the transmitter, and that there is no chance of it being accidentally re-applied whilst you are working on the board.

You will notice two indents on either side of the black connector block. Using a terminal screwdriver, carefully ease the grey plastic case away from the black front by sliding the screwdriver down and into the indents. When both sides of the front have been released, you may extract the board from the case, which will reveal the power selection jumpers, as shown below.

Select appropriate jumper positions and re-assemble the transmitter.
Declaration of Conformity

Declaration Number : TIM018 Iss. 2
Issue Date : 21 April 1997
Products Covered : TIM-018
Title : Triple Loop transmitter

This is to confirm that the Products covered by this declaration have been designed and manufactured to meet the following specifications:

EN55022:1987 Conducted Emissions: Class B
EN55022:1987 Radiated Emissions : Class B
IEC801-2:1984 Electro-Static Discharge Immunity: 8kV Air
IEC801-3:1984 Radiated ElectroMagnetic field Immunity: 3V/m
IEC801-4:1988 Fast Transient Immunity : AC 1kV, cable 0.5kV

Thus the products conform with the applicable sections of the following standards:

EN50081-1:1992 (normative)
EN50082-1:1992 (normative)

To confirm EMC compliance, representative models within the range have been independently tested and certified by MARCONI INSTRUMENTS EMC Department.

MARCONI CERTIFICATE # : TC96/0042A
MARCONI CERTIFICATE Issue # : 1
MARCONI Certificate Issue Date : 14 February 1996

Conditions

The meters are permitted a worst case error of 1% of A/D range during electro-magnetic disturbance, and must recover automatically when disturbance ceases without the need for human intervention, such as resetting, power-down etc.

The meters covered by this certificate must be installed in adherence to the following conditions :-
Signal cabling shall be routed separately to power carrying cabling (includes relay output wiring)
All signal cabling shall be screened. The screen shall only be terminated to the power earth terminal

This certificate applies only to meters carrying Serial Numbers 701001 or higher.

Signed as true and correct, for and on behalf of London Electronics Ltd.

J.R. Lees   Director
